LS Cast Resin Transformer

Introduction

Great progress has been made in the development and improvement of distribution transformers over the last decades.

The application of high quality insulation material and suitable selection of the coil structure for high stress have contribute to the development of LS CAST RESIN Transformers.

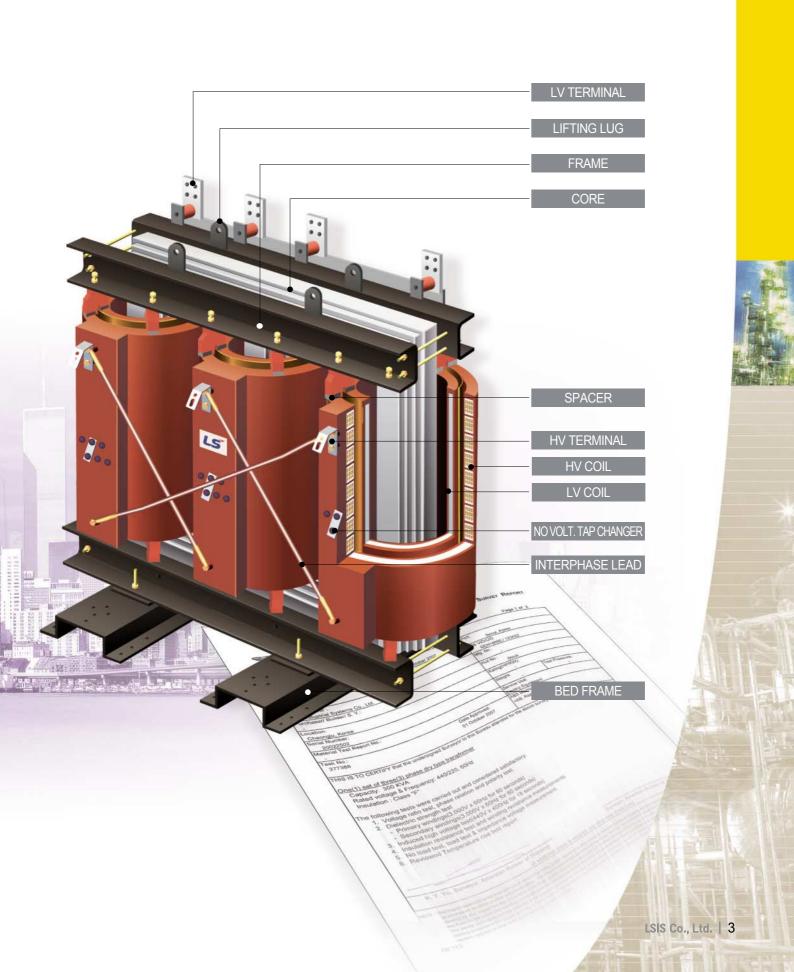

The LS CAST RESIN Transformer has succeeded in combining the advantage of oil-filled and conventional dry type transformers, which are fabricated with an epoxy resin. The windings are completely embedded under vacuum conditions. This casting method makes it possible to assure void-free epoxy penetration of both the inner layer and turn to turn insulation.

TRA-MEC

Applications

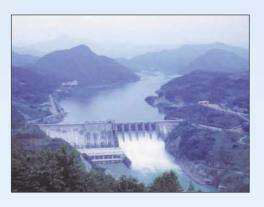

LS CAST RESIN Transformers can be used in various fields. Here are just a few possible applications.

- Indoor and outdoor unit substations
- Off-shore flatforms
- Commercial buildings
- Hospitals
- Shopping centers
- Water supplies
- Traction systems
- SCR Power supplies
- Ships
- Power Plants

Features

Environmentally safe

LS CAST RESIN Transformers will not emit oil or toxic gases into the atmosphere. Therefore, they do not pollute the environment and are strongly recommended as a replacement for askarel(PCB)-filled transformers.

Moisture proof

The complete casting of coils under vacuum prevents the penetration of moisture into the winding.

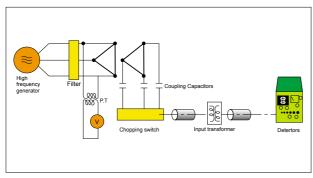

Therefore, it is suitable for both storage and operation in harsh environment and is capable of being switched on immediately after such storage without pre-drying.

No partial discharge

There is no possibility of partial discharge in LS CAST **RESIN Transformers.**

Whole core & coil is tested to guarantee the life expectancy of the insulation system.

LS CAST RESIN Transformers are free of partial discharge at least up to 1.3 times of the rated voltage.

Low noise

The coating of the core with an epoxy resin have lead to an appreciable noise reduction. Noise is also reduced due to the sound suppresing effect of the step lap cutting.

High overload capability

Based on the high thermal time constant factor of the windings, LS CAST RESIN Transformers can be overloaded for a short duration considerably higher than oil-immersed transformers. It has a greater capability to withstand sudden high overloads such as might be encountered in heavy traction applications.

High impulse strength

LS CAST RESIN Transformers are very resistant to impulse

Impulse withstand levels to 200kV are available because of careful design and special structure.

Maintenance free

Maintenance is almost completely eleminated. No checking of liquid level and no dielectric test for moisture absorption is required.

Due to the smooth coil surface, heavy dirt and dust build up is eleminated even under the worst circumstances.

The recommended routine maintenance is an occasional visual inspection.

Fire resistant

LS CAST RESIN Transformers have a very excellent characteristic of self fire-extinguishing and fire resistance. So there would be no fear of spread of fire even if fire took place around the electricity room.

Construction

LS CAST RESIN Transformers take pride in the ability to offer a wide variety of designs and configurations necessary to satisfy customer needs. Computer and CAD/CAM systems are used for quick and accurate design and manufacture to meet specific customer requirements.

CORE & FRAME

The core is made of highest quality, cold rolled, grainoriented, silicon steel and step lap joint.

Three legs of the core are arranged in a single plane and interconnected with a yoke.

The legs are circular structure and are carefully interlaced with stepwise arranged vokes.

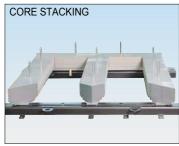

The core is mitred at a 45 degree angle and care-fully stacked and pressed to obtain low loss, exciting current and noise.

The core is insulated on both side of each lamination and protected against corrision by a resin coating and grounded in frame.

The frame consists of upper and lower steel channels. It holds the core and coil together.

To protect against corrosion, all steel parts are coated with epoxy paint.

HV & LV Coils

HV COIL (Vacuum Cast type)

- HV COIL Vacuum Cast in epoxy with a mold.
- Aluminum / Copper conductor.

LV COIL (Encapsulated Cast type)- standard

- -LV COIL Encapsulated after winding with prepreg layer insulation.
- Aluminum / Copper conductor.

LV COIL (Vacuum Cast type)- optional

- LV COIL Vacuum Cast in epoxy with a mold.
- Aluminum / Copper conductor.

Conductor insulated with a high grade is used in the winding construction.

Turns are arranged in multiple sections and layers in order to decrease transient maximum voltages. High voltage windings are cast in a mold under vacuum, using a computer controlled mixing and vacuum casting process.

So there is no void in the coils. The windings are fiberglass reinforced to provide additional mechanical strength.

After assembly, all HV coils are partial dischage tested to verify void free in the coils.

Specification

Specification Data

LS CAST RESIN Transformers are normally available with specification as follows:

Rated voltage

HV COIL: up to 36kV LV COIL: up to 600V

* Dual voltage coils can also be supplied

• Standard Tapping range : $\pm 2.5\%$, $\pm 5\%$

* Other ratings are available by request

Power capacity

Single phase: 20 ~ 2,000kVA Three phase: 50 ~ 15,000kVA

Frequency: 50Hz, 60Hz

* Other frequency is available by request

% Impedance voltage

IEC STD.: 4.0 ~ 8.0% IEEE STD.: 5.75 ~ 8.0%

* Other % impedance voltages are available.

Connections

HV COIL: Delta

LV COIL: Star with neutral point

* Other connections are available to meet requirement.

Temperature class (According to IEC 60076-11)

HV COIL and LV COIL: F CLASS * H class coils are available by request.

Conductor

Aluminum (standard) Copper (optional)

Noise Level (according to NEMA Std.)

500kVA - 60dB

750kVA - 64dB

1000kVA - 64dB

1500kVA - 65dB

2000kVA - 66dB

2500kVA - 68dB

*Noise reduction TRs are available by request.

Standards

LS CAST RESIN Transformers confirm to the requirements of IEC 60076-11 (2004).

However we can also meet the requirements of the following standards, upon request.

• IEEE C57.12.01 (2005)

General requirement for dry-type distribution and power transformers.

CSA Standard C9-02 (R2007)

Dry type transformers.

HD538.1,2,3(1995)

3 Phase Dry type distribution transformers. 50Hz from 100kVA to 2500kVA

BS 7806 (1995)

Dry type Power transformers

AS 2374 (1982)

Power transformers

* Transformers for rectifier applications and other special purposes can be supplied according to the client's specification.

TEST

Quality Assurance

Routine Test

the following test are made on all transformer.

- Resistance measurements
- Ratio test
- Polarity and phase relation test
- Impedance and load loss
- No load loss and exciting current
- Applied potential tests
- Double induced potential test
- Partial diacharge test(below 10 PC)

Optional Test

- Impulse test
- Temperature-rise test

Temperature-rise test carried out according to the simulated loading method.

- no load loss
- load loss

The total temperature rise is calculated in accordance with IEC 60076-11 or IEEE

- Short circuit test
 - · 3P 1600kVA Certified by KEMA

Audible sound level test

- · test by IEC 60076-10
- · LS use Pressure Level (Lp).

Lw(A) = Lp(A) + 10 LOG S

S = 1.25 X H X P

H: Transformer height

P: Measurement contour perimeter

Climatic, environmental and fire behaviour

- Certificated at CESI according to IEC 60076-11

Fire Behavior Class: F1 Environmental Class: E2 Climatic Class: C1

- Class C2 is available
